Access has announced a new beta version of Virus TI OS version 2.5, which features RTAS for Digidesign Pro Tools M-Powered, LE and TDM users as well as optimisations for Imageline FL Studio 7 and Ableton Live. It also includes beta support for Cakewalk Sonar and Steinberg Nuendo as well beta support for Microsoft Windows Vista 32.

OS 2.5 introduces a special Live Mode which lowers the latency on certain hosts such as Ableton Live. Virus Control's handling of songs with large amounts of track automation has been improved and video tutorials for Steinberg Cubase and Digidesign Pro Tools have been added.

Various issues have been addressed and improved or bug fixed.

The new software suite can be downloaded free of charge.
